#6375 Radiator Hangers Mounting Location Instruction

WWW.TOMSOFFROAD.COM

541.779.1339

TOOLS NEEDED:

Welder	Torch or 4" Grinder w/Cut-off Wheel
Fire Extinguisher	

PARTS INCLUDED:

2 - Upper Radiator Hangers	2 - Lower Radiator Hangers
----------------------------	----------------------------

IF YOU DO NOT FEEL CONFIDENT WELDING, PLEASE HIRE A PROFESSIONAL WELDER.

MOUNTING LOCATION INSTRUCTION:

1. For both upper and lower radiator hangers, measure to find the center of the core support. From center, measure 9.75 inches in each direction and mark. These two marks will be the center mounting location for the radiator hangers. This should result in the radiator hangers being centered on the core support and spaced 19.5 inches apart from each other at center.
2. Weld upper radiator hangers flush with the top edge of the core support. (Prior to welding, clamp brackets in place and ensure radiator fits appropriately).
3. Weld lower radiator hangers with a measured distance of 19 inches from the top edge of the core support and the top edge of the lower radiator hanger mounting surface where the radiator will rest. (Prior to welding, clamp brackets in place and ensure radiator fits appropriately).
